

## Mafilm Audio prevents data leakage on Macs with the Endpoint Protector Hardware Appliance

### PROFILE

#### Industry

Dubbing and  
Sound Engineering

#### The Challenge

Protect digital studio data (movies) against data leakage and theft from Macs on portable storage devices

#### The Solution

Endpoint Protector 4

#### Why Endpoint Protector?

- Offers protection in a Mac environment
- Intuitive and user-friendly interface
- Interface available in Hungarian language
- Customized delivery, as it was developed for old Macs with Motorola CPU

## Mafilm Audio protect their most valuable information with an A50 Endpoint Protector Hardware Appliance

#### About Mafilm Audio

MAFiLM AUDIO Kft. is the premier dubbing studio in Hungary. Annually, the studio is dubbing in Hungarian more than 100 feature films. The professional quality of their work is demonstrated also by the fact that the worldwide biggest studios (Universal-Paramount, DreamWorks, Sony-Pictures, Warner, 20th Century Fox and other independent studios) make their Hungarian synchronization at Mafilm Audio.

#### The Challenge

In Hungary movies usually appear at the same time with the international premiere or with just a few weeks delay. Mafilm Audio receives the images and the phonogram of the movie even before the official premiere; the chances for those to leak are pretty high. "In this business you can only make one mistake; no one receives a second chance," says Kalman Andras, the company's General Director.

Nowadays, the images and the phonogram of the movies get into the studio in digital format and in the same format they are transferred from one department to another. >>

"I am calmer since we've been using CoSoSys' DLP solution. It's good to know that it's not even theoretically possible for someone to steal original or synchronized movies with the help of USB sticks or DVDs from our studio."

**Executive Director  
Mafilm Audio**

Small devices, but with big storage capacity (USB sticks, external HDDs) represent a simple solution to steal entire movies from the studio. It was pretty obvious that Mafilm Audio needed a Data Leakage Prevention solution.

## The Solution

Although the problem was obvious, the solution was hard to find because of Mafilm's Macintosh environment. The decision to deploy Endpoint Protector 4 was easy to make since it accomplishes all their requirements: easy and fast implementation, control at any time of who, when and what is done in the network and control of file transfers from Macs to portable storage devices.

Besides these data loss prevention capabilities, CoSoSys was able to offer to Mafilm Audio a customized version of Endpoint Protector 4 as some of their Macs are equipped with Motorola CPUs and Endpoint Protector 4 is primarily compatible with Intel CPUs.

Endpoint Protector 4 Hardware Appliance A50 gives them flexibility, since it provides a balance between security and work efficiency. The deployment was fast and thanks to the intuitive and user-friendly interface, the IT administrators didn't have any problems working with it. Endpoint Protector's availability in Hungarian language was also a strong advantage.

## About Endpoint Protector Security Solutions

Endpoint Protector 4 protects PCs and Macs against data loss, data theft and data leakage by controlling portable storage devices like USB sticks, CDs/DVDs, HDDs, memory cards, etc.. For Windows Systems Endpoint Protector even provides monitoring and blocking of file transfers to online services and applications like e-mail, Skype, web browsers and many more. It provides strong security policies, preventing users from taking unauthorized data outside the company.

Companies will stay productive while maintaining their most valuable data safe. Endpoint Protector makes work more convenient, secure and enjoyable with mobile and portable devices and is offering an excellent ROI.
